

GRANDE C36

Technical Specifications

Description

The Bella Grande C36 is a very large pizza oven cart featuring ultra-premium construction and materials – perfect for larger families and parties. With a 36"W x 26"D cooking floor and 936 sq. in. cooking space, the Grande C36 is larger than most residential grills. It can bake 5 pizzas at a time, roast a large turkey, hold 8-10 roasting pans, or bake 20 loaves of bread.

Even with its large cooking capacity, the Grande C36 still heats up in about 15 minutes and is efficient with wood fuel. The oven's high throughput – as many as 80 pizzas in one hour – is enough for large gatherings.

The oven can bake and roast better than a conventional oven, grill better than a charcoal or gas grill, and it has more capacity than most residential grills; it's the one oven that can do it all.

The Grande C36 features all 304 stainless-steel, solid-weld construction for the oven dome, landing, door, chimney and the pizza oven cart, promising years of worry-free, rust-free operation. The Grande C36 cooking floor uses authentic firebrick baking stones with a higher cordierite content usually reserved for commercial oven applications to protect the floor from thermal shock and reduced "spalling." The vent design on the Grande C36 is outside the cooking chamber so the oven retains heat longer and the food has a more pronounced wood fired flavor.

The Grande C36 cart features two handles and four wheels, two with locking casters, making it easy to move and position the oven. The Grande C36 is a great choice for entertaining large groups of family, friends and neighbors.
