

Build your very own DIY Authentic Brick Oven

The Authentic Brick Oven Kit comes with high end industrial grade quality materials on the market today that you would need to build the brick oven. Each kit includes enough medium duty 9" x 4.5" x 2.5" industrial grade firebricks to build the oven dome and vent, and cooking floor. It also comes with high temp mortar, dome insulation and floor insulation- along with the DIY Authentic Brick Oven.

Your DIY Authentic Brick Oven Kit features only the best industrial-grade materials, ensuring that your oven will reach and hold pizza making temperature and retain heat for baking and roasting. Our brick contains around 50 % silica and 35 % alumina. This composition helps the oven to heat up and cool down without causing structural issues. Medium duty firebrick helps to establish the required temperature for baking pizza quicker than other clay bricks. As the hearth made with medium duty firebrick may cool down quickly, it will help to prolong the lifespan of the oven. The Ceramic Fiber Board floor insulation are rated for 1900 degrees Fahrenheit and Ceramic Fiber Blanket dome insulation are rated for 2,300 degrees Fahrenheit and are incredibly efficient, and pre mixed Mortar is rated for 3000 degrees Fahrenheit and is super wet enough you don't need to wet the brick for installation – saving you time.

We provide enough insulation for the oven dome and under the oven floor to retain high heat inside the oven while keeping the outside enclosure from heat loss. Making these ovens very efficient.

Optional Accessories

DuraVent UL103HT chimney system

The highest-grade materials to build an Italian brick oven.
